In 1999, Autodesk's first licensing agreement for AutoCAD ended the original licensing agreement for AutoCAD LT, a simplified version of AutoCAD. AutoCAD LT was a stripped-down version of AutoCAD that competed directly with a range of inexpensive CAD software products. After a series of changes, Autodesk released AutoCAD LT Professional Edition in 2005. The newest version of AutoCAD, AutoCAD LT 2018, was released in December 2017 and replaces the previous 2017 release. The release also includes a subscription offering called AutoCAD 365. The new release provides software-only subscribers with the latest updates, as well as new features. Prior to the release of AutoCAD 2019, the current release of AutoCAD LT, AutoCAD LT 2019, was released in December 2018. This version adds features including block-based 2D drawings, dimensional drawings with and without profiles, advanced 3D modeling, integrated drafting and design tools, and architectural drafting and 2D drafting tools. AutoCAD LT 2019 also adds the ability to link to Excel spreadsheets, Power BI reports, and SharePoint lists. AutoCAD LT 2019 also includes a cloud-based subscription, AutoCAD 365, which offers subscribers access to the latest updates and new features. History Development of AutoCAD began in 1982 when Douglas H. Bertsch, the architect at the University of Minnesota, was part of a team developing a CAD program that could be used in a classroom setting. The program was meant to be used to create a "floating book" for illustrating the building of furniture. The code of the university's version of AutoCAD, named AutoComp, was posted to the computer science department's bulletin board system. In 1982, the system administrator, Dave L. Welch, asked for the source code and posted it for all to use. The first version of AutoComp was limited to a resolution of 300 dots per inch (dpi) and was released under the GNU General Public License. In 1983, Autodesk, a publisher of computer-aided design (CAD) software, acquired the intellectual property rights to the code and renamed it AutoCAD. With AutoCAD, Bertsch had imagined a multi-user, networked design environment that was priced and sold similar to the LaserWriter printer, with a starting price of $12,000. The first iteration of AutoCAD ran on a PDP-11

More particularly, the invention is concerned with the communication system of the kind described in which the condition of communication network equipment in the exchange is checked when data is transmitted through the predetermined route, and the operation of the exchange is controlled in accordance with the checking result. In general, in a communication system, data to be transmitted is entered into a facsimile apparatus at a calling terminal station, where the data is temporarily stored in the facsimile apparatus. Then, the facsimile apparatus makes a first connection through a first channel with a called station to which the data is to be transmitted, whereupon a second connection is made through a second channel with a predetermined route to another facsimile apparatus which is to receive the data transmitted from the calling facsimile apparatus. In the course of the second connection, it is required to carry out a route search procedure. The called station is informed of a dial number of the calling station through a communication network. The called station is usually installed with an automatic dialing circuit and answers the call from the facsimile apparatus at the calling station through the first channel by sending a proper signal through the second channel. The route search procedure is performed to locate a route to another facsimile apparatus which is to receive the data transmitted from the calling facsimile apparatus. That is, the route is located to another facsimile apparatus at which the facsimile apparatus which is to receive the data is expected to be. Thus, the facsimile apparatus at the called station is brought to a busy state to store the data transmitted from the calling facsimile apparatus in a memory device in the facsimile apparatus to await a call from the called facsimile apparatus. An example of a communication network which permits communication to be performed by connecting the facsimile apparatus which is to receive data and the calling facsimile apparatus through a predetermined route is shown ca3bfb1094

Q: Python/OpenCV: Converting RGB to Gray/Grayscale So, I have an image as an RGB image and I would like to convert it to a grayscale image. I have tried a lot of solutions but I'm stuck at the end. I know that the average of three channels is gray. But I don't know how to do that. I have been looking for ways to do this using OpenCV. The image I'm trying to convert is this one: This is what I get in Matlab: I have tried to convert the image using the command: canny = cv2.Canny(img,50,200); But I only get this: Does someone know how to convert it to gray or grayscale using OpenCV? A: The grey image is equal to the result of the following operation: (img1-img2)/img1 + (img3-img4)/img3 I think this is what you want. Hope it helps! LAS VEGAS, Nev. (AP) — It wasn't pretty, and at least one player felt the drama of the regular season was tinged with just a bit too much intrigue. The Golden State Warriors closed the preseason with an exhibition game on Friday against the Los Angeles Clippers at Vivint Smart Home Arena. The game didn't go anything like most of the drama-filled Warriors' final three games of the preseason. "It wasn'
