Category:Software design patterns Category:Software engineering  
Category:Subroutines Category:1977 software Category:Computer-aided design  
softwareQ: ASP.NET MVC File Upload With Multiple File Field I'm trying to build an ASP.NET MVC web application that has a FileField, where the user can upload one or more images. I have read through the ASP.NET MVC File Upload page and one example. My initial thought was to use an HttpPostedFileBase object for the FileField, but then I had to make sure to pass all the ModelState errors back to the action method, where the code looked like this: [HttpPost] public ActionResult Upload(HttpPostedFileBase myFile, string fileName) { if (ModelState.IsValid) { if (myFile.ContentLength > 0) { var file = myFile.InputStream; //save the file to disk } } return RedirectToAction("Index", "Home"); } This looked like a rather cumbersome way of doing this. In order to avoid having to manually parse the myFile object, and thus avoid all the ModelState errors, I thought I could do something like this: [HttpPost]

---

```
public ActionResult Upload(HttpPostedFileBase myFile) { if (ModelState.IsValid) { if  
(myFile.ContentLength > 0) { var file = myFile.InputStream; //save the file to disk } }  
    return RedirectToAction("Index", "Home"); } This code still gives me the same  
ModelState errors. Is there a way to do this? Edit: I found something like this, but it  
didn't work: [HttpPost] public ActionResult Upload([Model ca3bfb1094
```

## AutoCAD Free Download

Select "Plugins" and select "KeygenTool". If "KeygenTool" is not in your menus, it is a hidden menu item, click on the up arrow and the menu item will appear. Use the default settings or customize your own: Click on the Keygen options button. Select the file name for your file, and save it to your desktop. Open the file with an editor and save it with your own extension. You're done! Slideshow ( 2 images ) (Reuters) - Boeing Co BA.N is adding three new pilots to the crew of its new 787 Dreamliner jet in the coming weeks, the planemaker said on Wednesday, after a major software glitch on a previous plane grounding the jet for six months. The Seattle-based planemaker said three Boeing Pilots and Pilots Trainers had joined the flight test team in a career transition following the seven-month grounding. Boeing resumed flying the Dreamliner on Jan. 7 after installing software changes to address a series of battery incidents. Some airlines, including ANA Holdings Inc 7272.T, canceled orders for the new Dreamliner, which entered service last year after debuting the world's first all-carbon-fiber passenger jet. In a statement, Boeing said the additional Dreamliner pilots would be responsible for performing checks and controls on the jet's fuel systems and steering elements. Electrical arcing is a common problem in industrial and household environments, and can lead to fires, electrocution and other disasters. These problems have long been recognized by electrical engineers, but have been difficult to solve. Electrical arcs in industrial environments are often caused by combustible material or flames reaching an electrical conductor. Conventional methods of dealing with these hazards include the use of fireproof enclosures to protect workers and equipment, and use of safe work practices such as preventing the movement of combustible material within the enclosure. Electrical arcs in residential environments are often caused by a temporary voltage spike, such as from a loose electrical connection or a malfunctioning appliance. Typically, such a spike causes a short circuit in an electrical system. Conventional methods of dealing with electrical arcing include an excessive use of power tools such as drills and saws, a careful and deliberate cleaning of electrical outlets and switches, and using conventional electrical ground spikes. A method of detecting electrical arcing in a circuit is described in U.S. Pat. No. 4,

## What's New in the AutoCAD?

Extend and reuse: Expand your existing drawings with the ability to reuse or further extend your existing drawings by using the extended object data you've already collected. If a model changes for whatever reason, you can now change the model with your existing data. (video: 1:10 min.) Workflow: It takes you a couple of seconds to open a drawing in AutoCAD. In the new release, we've made that process much faster. It takes you a second or two to create a new drawing, but it's instant to open existing drawings. (video: 2:03 min.) Extend and reuse: We've updated the product with extended objects that help you extend or reuse existing AutoCAD drawings, which helps you work faster, and makes your drawings more efficient. You're no longer required to import drawings from other software. You can now create drawings with extended objects, such as a Bill of Materials, in just a few seconds and then you can open or import them in a moment. It's truly a time-saver! (video: 1:16 min.) Extend and reuse: We now support extended objects, which makes it much easier to extend or reuse existing drawings. You can now do that in just a few seconds. It's truly a time-saver. (video: 1:16 min.) Useful new tools: This is the new command line on the insert window to copy an existing graphic object to your clipboard, to quickly use it for design purposes, to integrate it in other drawings, or to change its color. (video: 1:42 min.) Useful new tools: You can now easily save drawings or drawings parts in ZIP files and

---

attach them to e-mail messages. The clipboard command line works as it did before, but now with a new icon. (video: 1:47 min.) Useful new tools: You can now easily create an outline to help you quickly and accurately create or move the extents of other parts. (video: 1:40 min.) Useful new tools: You can now create a new master that you use to set all your layers and their visibility, and then save them for the next design session. (video: 1:21 min.) Use

---

## System Requirements:

2.5 GHz Quad-Core Intel Core i5-4200 or AMD equivalent 8 GB RAM OS: Windows 10 (64-bit) Processor graphics: NVIDIA GTX 960 or AMD equivalent HDD: 8 GB available space Additional Notes: 1. TUTORIAL. Tutorial video here 2. To play online go to Tutorial.jar 3. For offline play go to Sock-A-Rama 4. For support please post your issue to:
