Can you describe what it's like, to play as these superstars? I've never experienced anything quite like it. I don't have any stats or highlights available right now, but I'm definitely proud of the way we've been able to capture these players' styles of play - not just visually, but from a gameplay standpoint as well. Fifa 22 Free Download introduces "HyperMotion Technology," which has been inspired by the real-life players playing a complete, high-intensity football match in motion capture suits. We created an entirely new motion capture animation system so that players' natural movement patterns in-game are incredibly realistic - and our animation team has done an incredible job on recreating the movement we've recorded on real-life players. How has creativity been employed in moving these players into the game? It took a lot of time to actually capture the full range of movement on these players. On top of that, they all play so well that it's hard to show their natural movement on the field. So we had to expand the scope of our motion capture process to suit their playing style. What's the impact on gameplay in moving these real-life players to a game like FIFA? The goal was to deliver the highest visual fidelity ever in a FIFA game. And when you match that against gameplay that's incredibly realistic, you can really see the difference. I understand that the full match is made up of many individual moments that players perform? Absolutely. We have two sets of animation data - the "control layer" which contains the timing of player actions, such as when they score, how they perform shots and their celebrations - and the "marker layer" which contains the positions and movement of each player, and the pitch position, to allow us to manipulate any part of the scene. With "HyperMotion Technology," we can animate anything on the pitch
