In some cases, these applications are often more stable and have features not available in the original operating system. A few application emulators can even be used to update existing programs, as they can re-package a program into another application or the original application format without any changes to the original source code. Another form of software emulation is through system overlays or system mods. These modifications are made to the operating system itself, usually through the use of an external or internal device such as an operating system or game console, respectively. Applications Installing an application on the Android system is very simple, as Android users can get all the apps they want by downloading them from online sources, and they can either install the apps from these sources or they can be transferred to their Android device through a variety of ways. Most apps can be installed through the Apps management of the device, from which the user can either download them or they can be transferred to the device through the USB interface. In most cases, there is also a firmware update for the device that contains the necessary files for installing the applications. For a variety of reasons, the user can install a number of applications on his Android device, and some of these reasons are listed below: Applications can be installed for testing purposes, or to transfer apps from one Android device to another. In some cases, users can install apps for free, such as programs that are part of the Android operating system, or apps that the user has purchased. In other cases, users will have to pay for apps, such as apps that run in the browser, or apps that provide news, weather, or other information that is of interest to the user. Additional features in the application are
