ABOVE: A dragon exits an iPhone, the iPhone having come from Adobe's stock library, accessible through the app. **BELOW:** A set of images created with Adobe Photoshop Sketch on the iPad Pro with the Apple Pencil (as it is with the rest of the illustrations in this review). If you need to operate in secrecy, you need different software. Even back around CS2 (or maybe it was Photoshop 7), Photoshop recognized if you were scanning money, showed you a warning box, and refused to open it. Since Adobe knows who you are, it's trivial for Adobe to send the Secret Service your personal information and physical location in real-time if they choose to. Adobe knows what you're doing because Photoshop is talking to Adobe over the Internet in the background; that's how activation works. Run many days offline, and the program will stop running until you go online again for it to validate and swap data. Nice review but after upgrading to LR5.2 RC I think performance is better than with LR4. Working on a project with 1500 D800 NEFs my impression is that the smart previews increase speed while working in the Developer mode - in Lib. mode however everything slows because the JPEG previews are used. So far I am not sure how the Jpegs are used as previews when you have the smart previews (DNGs) available. But have to say that I am happy with 5.2 RC although I will say bye-bye to LR the day they make it part of CC. We're sure you'll agree, back in the old days Lightroom didn't have many great features. There was Keyword Lookup, there was the scope panel, the master panel was a filer, the admin panel and of course the basic edit functions, which were without a doubt the backbone of Lightroom.

You can also use the previous blends, like Color Burn, Color Dodge, and Color Melting; but these new ones are more versatile as you can create interesting effects from the two layers that you blend.
