To help keep your photos looking great, we've picked 12 of the most useful tools in Photoshop and explained what they do, where to find them, how to use them, and a few tips and tricks for getting the most out of them. We've also included some great resources in there in case you'd like to learn about a tool in more depth. The idea of running software as complex as Photoshop directly in the browser would have been hard to imagine just a few years ago. However, by using various new web technologies, Adobe has now brought a public beta of Photoshop to the web. (If you prefer watching over reading, this article is also available as a video.) Chrome has introduced an excellent port of the full version of Adobe Photoshop to the web. It may seem obvious, but Photoshop is a complex game with powerful tools, and the number of times you'd have to switch to your Mac to find the right tool, close the document, and open it back up again, is many. Now, people can do it all in the browser. Adobe contacted me three years ago, and I welcomed the idea of working together. When I started working with Adobe, they had just introduced the open-sourced WebAssembly engine (Emscripten). They had a specific set of limitations and constraints for WebAssembly in the browser. We worked around these limitations in order to build a port that was efficient, powerful, and capable of performing all the tasks people needed in Photoshop. Through that research, we discovered storage systems, native Web Components, service workers, and a whole slew of other web technologies that were part of the effort to make web applications more powerful. I was granted the opportunity to work on a number of

design systems as people worked to develop the port, and I helped Facebook, Twitter, Mozilla, Mozilla, and others research these same technologies and workflows. e3d0a04c9c

Most importantly, you'll get the same Photoshop experience, now on the Windows and Mac desktop. How do we do it? This process has had a lot of planning and internal discussion, but what we can tell you is that the goal of this change is not to reduce support (though it's always better if we can avoid it). Of course, our end goal is to support only the best possible feature set, in a way that makes sure Photoshop continues to support new users.
