Lightroom is a fantastic application and packs a lot of power and flexibility for a free product. I understand that it would be too much work to bring that full featured interface to mobile devices, so I'll just have to make do with the tablet app. Some of it does work very well on touch devices but I routinely miss some dialog buttons when moving around, especially for the shutter and drive's. Photos on iPad have quality and ergonomics very nice. I chose Adobe Lightroom, but with the new Adobe Creative Cloud, there will probably be a bit more incentives to stay for a while with the iPad. Photoshop is a awesome piece of software in it's own right. I used 3dsmax for years and it worked great for my needs, but I didn't have the fantastic UI that photoshop has. I'm absolutely loving the new interface, although it takes a bit to get used to, it's like a motorcycle for sure.

In a few years, when historians of the future are looking back at the beginning of this decade, they will note the ability to create new digital data on a whim and an access point to that data by the world at large. That is the promise of cloud technology. We can create, store, and access data, all from remote high-speed servers in the cloud. Putting these tools into the hands of average users means that they can less easily be held captive by data that's siphoned off from their computer and that they don't have any control over. Despite the apparent benefits, it's not hard to figure out why end users still choose to access their data from the local hard drive. After all, you might want to quickly access data that's stored in the cloud, but you don't want to have to relinquish your data to make that happen.
